                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A cDNA clone. (AAT14714) codes for human cell surface antigen CD40. It was isolated using a rapid immunoselection method in which a cDNA library is constructed in mammalian (e.g. COS) cells using novel expression vectors (see also AAT14702 and AAT14705), and cells expressing the antigen are selected using antibody-coated plates (panning). This immunoselection cloning method, developed to clone genes for cell surface antigens of human lymphocytes (see also AAT14703-04 and AAT14706-26), has general appli. Cell surface antigens are obtd. for diagnostic and therapeutic use. (Updated on 25-WAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GGGCAGTGTTACGTGCAGTGACAACAGTACCTCCACGATGGCCAGTGCTGTGATTTG 120

A method has been developed of defining a set of compounds that modulate the expression of a target nucleic acid (tNA) sequence via binding of the compounds with the tNA sequence. The method comprises generating a library of virtual compounds in silico according to defined criteria, and evaluating in silico the binding of the virtual compounds with the tNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This nucleotide sequence comprises human CD40 antigen cDNA. It was isolated by a novel method for cloning cDNAs from mammalian expression clibraries that is based on transient expression of an antigen in cukaryotic cells and physical selection of cells expressing the antigen by adhesion to an antibody-coated substrate, such as a culture dish. The method is useful for the isolation and molecular cloning of any protein which can be expressed and transported to the cell surface membrane of a cukaryotic cell. It has been used to clone games (see AAV63442-c3).

CC encoding cell surface antigens from mammalian lymphocytes (see AAV6344.

CC 55). The isolated genes can be expressed in a prokaryotic or eukaryotic chost cells to produce the encoded protein. The invention also provides (clipt efficiency expression vectors (see AAV63441 and AAV63444) which allow the generation of very large mammalian expression libraries. The purified genes and proteins are useful for immunodianneric and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      purified genes and proteins are useful for immunodiagnostic and immunotherapeutic applications, including the diagnosis and treatment of immune-mediated infections, diseases, and disorders of animals, including humans. according to defined criteria. Also described are: (1) a method of defining a set of oligomucleotides (ONs) that modulate the expression of a LNA sequence via binding of the ONs with the tNA sequence comprising generating a library of virtual compounds in silico according to defined criteria, and evaluating in silico the binding of the virtual ONs with the tNA according to defined criteria, and (2) a method of defining a set of compounds that modulate the expression of a LNA sequence via binding of the compounds with the tNA. The methods can be used for the generation and identification of synthetic compounds can be used for the generation compounds is used to identify nucleic acid sequences that are tractable to a variety of nucleotide sequence-based technologies, e.g. antisense drug discovery and target validation. AAZ40852 to AAZ41220, and AAY52701 to AAX52704 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

```

```
This nucleotide sequence comprises human CD40 antigen cDNA. It was isolated by a novel method for cloning cDNAs from mammalian expression libraries that is based on transient expression of an antigen in cutaryotic cells and physical selection of cells expressing the antigen by adhesion to an antibody-coated substrate, such as a culture dish. The method is useful for the isolation and molecular choning of any protein which can be expressed and transported to the cell surface membrane of a cutaryotic cell surface antigens such as CD1a, CD1, CD2, CD6, CD7, CD13, CD14, CD16, CD19, CD20, CD22, CD26, CD27, CD23, CD14, CD16, CD17, CD23, CD24, CD28, CD13, CD14, CD16, CD17, CD28, CD27, CD28, CD27, CD28, CD28
                     cDNA encoding human CD40 antigen - useful for cloning cDNA encoding cell surface antigens, constructing cDNA libraries, expressing vectors for expression in eukaryotic cells or their fragments.

This invention describes novel pure proapoptotic dependence peptides
which comprise a sequence of an active dependence domain selected from
dependence polypeptides consisting of p75NTK, androgen receptor, DC.
thuringtin polypeptide, Machade-Joseph disease gene product, SCA1, SCA2,
SCA6 and atrophin-1 polypeptide. The proapoptotic peptides are capable of
inducing cell death and can be used to develop products to madiate or
inhibit apoptosis. The methods can be used for reducing the severity of a
proapoptotic dependence domain mediated pathological conditions e.g.
thurington's disease, Alzhelmer's disease, Kennedy's disease,
Coseph disease, stroke or head trauma. They can also be used for reducing
the severity of a pathological condition mediated by upregulated cell
proliferation or cell survival e.g. neoplastic, malignant, autoimmune or
fibrotic conditions. This sequence encodes the human CD40 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                48 Arigerregreriedentedengradentedentedentedentedentedenteda 107

The present sequence is that of cDNA encoding human cell surface antigen (CSA) CD40. The CDNA was isolated using a rapid immunoselection cloning method of the invention, designed to isolate CSA cDNAs. The method is based upon transient expression of a CSA in enkaryctic cells and physical selection of cells expressing the antigen by adhesion to (panning on) an antibody-oated substrate such as a culture dish. CSA nucleic acids isolated by the method of the invention, and the proteins they encode, are useful for immunodiagnostic and immunotherapeutic applications, including the diagnosis and treatment of immune adiated infections, diseases, and disorders in animals, including humans. These disorders include asthma, immune-complex disease, amyloidosis, parasitic diseases
                                                                                                                      Isolated nucleic acid molecule encoding the CD19 cell surface antigen, useful for immunodiagnosis and immunotherapy of immune-mediated infections or disorders, e.g. asthma, immune-complex disease, parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      624 AGAGCCTGGTGGTGGTCCCCATCATCTTCGGGATCCTGTTTGCCATCCTCTTGGTGCTG

AA247685 to AA247768 represent phosphorothicate antisense oligomuclectides targeted to human CD40, which can be used to inhibit the expression of human CD40. CD40 is involved in lymphocyte activation, tumour growth and/or angiogenesis. Inhibition of CD40 is used to treat or prevent immune-associated diseases (specifically guest vs. host disease, allograft rejection or autoimmune diseases); inflammation (specifically asthma, rheumatoid arthritis, allograft rejection, inflammatory bowel disease or psoriasis) or hyperproliferation (specifically cancer and tumours). The antisense oligomuclectides are also useful as diagnostic and research reagents. AA247769 represents the human CD40 nucleotide sequence. AA24770 to AA247769 represent human CD40 forward and reverse PCR primers, and a human CD40 Primers and a prose used in the exemplification of the present invention

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new ganes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA construction of a nonredundant cDNA library Genome Res. 11 (2), 281-289 (2001)

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Rayloration Research Group in Riken Connel Sciences Center and Genome Science Laboratory in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Tissues were project of Genome Rayloration Research contributed to prepare mouse tissues.

Tissues were provided by David A. Hume ( Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane, Q 4072 Australia ) whose assistance we gratefully acknowledge.

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RIGA) system--384-format sequencing pippeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Tissues were provided by David A. Hume ( Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane, Q 4072 Australia ) whose assistance we gratefully acknowledge.

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a norredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Center for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistence we gratefully acknowledge.
